## AAY96527 standard; peptide; 34 AA. ALIGNMENTS

04-SEP-2000 (first entry)

AAY96527;

Thrombopoietin mimetic peptide compound 8.

Thrombopoietin; mimetic; TMP; TPO; platelet; anti-human immunodeficiency virus; anti-HIV; immunosuppressive; anti-inflammatory; linker. megakaryocyte; production; anti-anemic; dermatological;

Synthetic.

```
A compound which binds to an mpl receptor comprising a thrombopoletin commetic peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_nTMP_2], is new. TMP_1 and TMP_2 are amino acid sequences varying from at least composition to 14 residues in length comprising X_2-X_1_0, X_2-X_1_1, X_2-X_1_2, X_1-X_1_2, X_1-X_1_2, X_1-X_1_2, X_1-X_1_2, X_1-X_1_2, X_1-X_1_3, and composition (X_2-X_1_3, X_2-X_1_4, X_1-X_1_0, X_1-X_1_1, X_1-X_1_2, X_1-X_1_3, and composition (X_1-X_1-4, X_1-1, X_1-X_1-1, X_1-X_1-3, and composition (X_1-X_1-4, X_1-1, X_1-X_1-1, X_1-X_1-3, and composition (X_1-X_1-4, X_1-1, X_1-X_1-2, X_1-X_1-3, and composition (X_1-X_1-1) = X_1, Y_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1 = X_1, Y_2-1, Y_3-1, Y_3-1 = X_1, Y_2-1, Y_3-1, Y_3-1 = X_1, Y_2-1, Y_3-1, Y_3-1, Y_3-1 = X_1, Y_2-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_3-1, Y_

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A compound which binds to an mpl receptor comprising a thrombopoietin c mimetic peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_nTMP_2], c is new TMP_1 and TMP_2 are amino acid sequences varying from at least c 10 to 14 residues in length comprising X_2 X_1_0, X_2-X_1_1, X_2-X_1_2, C X_2-X_1_3, X_2-X_1_4, X_1-X_1_0, X_1-X_1_1, X_1-X_1_2, X_1-X_1_3, and c X_1-X_1_4, X_1=1, A, V, L, S or R; X_2=E, D, K or V; X_3=G or A; C X_4=P; X_5=T or S; X_6=L, I, V, A, or F; X_7=R or K; X_8=Q, N, C C L, F, S, T, K, H, or E; X_1_2=A, I, V, L, F, G, S, or O; X_1_3=R, K, C C T, V, N, O or G; X_1_4=A, I, V, L, F, G, S, or G; L, 1=1 inker c comprising 1 to 20 amino acids; and n=0 or 1. The compounds bind to and c activate the c-Mpl receptor which mediates the activity of endogenous c thrombopoietin. The TMPs are useful for increasing the production of c is useful for treatment of diseases which involve thombocytopenia, e.g. c c virus associated ITP, and systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC The present invention describes composition of matter (I) comprising an CC (X1)a-FI-(X2)b, where: F1 = an FC domain; X1 and X2 = are each CC (X1)a-FI-(X2)b, where: F1 = an FC domain; X1 and X2 = are each CC independently selected from -(L1)C-P1, -(L1)C-P1-(L2)d-P2. (L4)f-P2 -(L3)e-P3. (CC -(L1)C-P1-(L2)d-P2-(L3)e-P3. (CC -(L1)C-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 (CC where P1, P2, P3, and P4 = are each independently sequences of CC pharmacologically active peptides; L1, L2, L3, and L4 = are each independently composition can CC independently linkers; and a, b, C, d, e, and f = are each independently CC (O or 1, provided that at least 1 of a and b Is 1. The composition can CC have cytostatic, antiasthmatic, thrombosity and immunosuppressive CC activities. DNAs, vectors and host cells from the present invention can CC useful for treating cancer, asthma, thrombosis, or autoimmune diseases. CT he use of an Fc domain (rather than a Fab domain) can provide a longer CC half-life or incorporate functions such as Fc receptor binding, protein CC A binding, complement fixation, and possibly placental transfer. AAA69443 CC sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

cc mimetic peptide (TMP) dimer joined by a linker [TMP]-(L_1)_nTMP_2], cc mimetic peptide (TMP) dimer joined by a linker [TMP]-(L_1)_nTMP_2], cc is new. TMP_1 and TMP_2 are amino acid sequences varying from at least cc 10 to 14 residues in length comprising X_2-X_1_0, X_2-X_1_1, X_2-X_1_2, cc X_1-X_1_3, X_2-X_1_4, X_1-X_1_0, X_1-X_1_1, X_1-X_1_2, X_1-X_1_2, and cc X_1-X_1_4, X_1=1, A, V, L, S or R; X_2=E, D, K or V; X_3=G or A; cc X_4=P; X_5=T or S; X_6=L, I, V, A or F; X_7=R or K; X_8=Q, N, cc X_4=P; X_5=T or S; X_6=L, I, V, A, F, M, or K; X_1=A, I, V, C or E; X_9=W, Y or E; X_1_0=L, I, V, A, F, M, or K; X_1=A, I, V, C c L, F, S, T, K, H, or E; X_1_2=A, I, V, L, F, G, S, or Q; X_1_3=R, K, C C L, F, S, T, K, H, or E; X_1_4=A, I, V, L, F, T, K, E, or G; L_1=linker cc comprising 1 to 20 amino acids; and n=0 or 1. The compounds bind to and cc activate the c-Mp1 receptor which mediates the activity of endogenous thrombopoietin. The TMPs are useful for increasing the production of platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which cc is useful for treatment of diseases which involve thombocytopenia, e.g. cc virus associated ITP, and systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC Fc domain, pharmacologically active peptides, and linkers. Where [I] is:

CC (X1)a-F1-(X2)b. where: FI = an Fc domain; X1 and X2 = are each

CC independently selected from -(L1)c-P1-(L2)d-P2,

CC (L1)c-P1-(L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4

CC where P1, P2, P3, and P4 = are each independently sequences of

CC pharmacologically active peptides; L1, L2, L3, and L4 = are each

CC independently linkers; and a, b, c, d, e, and f = are each independently

CC 0 or 1, provided that at least 1 of a and b is 1. The composition can

CC have cytostatic, antiasthmatic, thrombolytic and immunosuppressive

CC activities. DNAs, vectors and host cells from the present invention can

CC activities. DNAs, vectors and host cells from the present inventions are

CC useful for treating cancer, asthma, thrombosis, or autoimmune diseases.

CC The use of an Fc domain (rather than a Fab domain) can provide a longer

CC abinding, complement fixation, and possibly placental transfer. AAA69443

CC to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid

CX sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6943 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                            autoimmune diseases -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a rab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA66925 to AAA69255 and AAB16055 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
FC domain, pharmacologically active peptides, and linkers where (1) is:
(X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each
independently selected from -(L1)c-P1-(L1)c-P2-(L2)d-P2-(L3)e-P3-(L4)f-P4
-(L1)c-P1-(L2)d-P2-(L3)e-P3-(D1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4
where P1, P2, P3, and P4 = are each independently sequences of
pharmacologically active peptides; L1, L2, L3, and L4 = are each
independently linkers; and a, b, c, d, e, and f = are each independently
o or 1, provided that at least 1 of a and b is 1. The composition can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein a binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid
Fc domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4
-(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4
where P1, P2, P3, and P4 = are each independently sequences of
pharmacologically active peptides; L1, L2, L3, and L4 = are each
independently linkers; and a, b, c, d, e, and f = are each independently
0 or 1, provided that at least 1 of a and b is 1. The composition can
have cytostatic, antiasthmatic, thrombolytic and immunosuppressive
activities. DNAs, vectors and host cells from the present invention can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP_1 · (L_1)_nTML_2], is new. TMP_1 and TMP_2 are amino acid sequences varying from at least 10 to 14 residues in length comprising x_2 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 - x_1 -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Thrombopoietin; mimetic; TMP; TPO; platelet; anti-human immunodeficiency virus; anti-HIV; immunosuppressive; anti-inflammatory; linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6944 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Thrombopoietin mimetic peptide compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        04-SEP-2000 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modified-site

          FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2. (L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  L, F, S, T, K, H, or E; X_1_2 = A, I, V, L, F, G, S, or Q; X_1_3 = R, K, T, V, N, Q or G; X_1_4 = A, I, V, L, F, T, R, E, or G; L_1 = linker comprising 1 to 20 amino acids; and n = 0 or 1. The compounds bind to and activate the c-Mp1 receptor which mediates the activity of endogenous thrombopoietin. The TMPs are useful for increasing the production of platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which is useful for treatment of diseases which involve thombocytopenia, e.g. applastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency virus associated ITP, and systemic lupus erythematosus.
                                                                                                                                                                                                                                                             Novel composition of matter comprising an pharmacologically active peptides, useful
                                                                                                                                                                      The present invention describes composition of matter (I) comprising

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an FC domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as FC receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6944 to AAA69526 and AAB18035 to AAB18033 represent nucleotide and amino acid
                     The present invention describes composition, and linkers. Where (I) is: FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L3)e-P3-(L4)f-P4 -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 -(L1)c-P1-(L3)d-P2-(L3)e-P3-(L4)f-P4 -(L1)c-P1-(L3)d-P2-(L3)e-P3-(L4)f-P4 -(L1)c-P1-(L3)d-P2-(L3)e-P3-(L4)f-P4 -(L1)c-P1-(L3)d-P3-(L4)f-P4 -(L3)c-P1-(L3)d-P3-(L4)f-P4 -(L1)c-P1-(L3)d-P3-(L4)f-P4 (L3)d-P3-(L1)c-P1-(L3)d-P3-(L1)c-P1-(L3)d-P3-(L1)c-P1-(L3)c-P1-(L3)d-P3-(L1)c-P1-(L3)c-P1-(L3)c-P1-(L3)c-P1-(L3)c-P1-(L3)c-P1-(L3)c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modified peptide; therapeutic agent; fusion; Fc domain;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAB17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
     RESULT 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The use of an FC domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69436 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                   FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2.

(L1)c-P1-(L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activitles. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               autoimmune disease; cytostatic; antiasthmatic; thrombolytic; immunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; anta MMP; inhibitor; erythropoietin; thrombopoietin; interleukin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
 where PI, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. The present annual court was compositions, and linkers where (I) is:

C (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each

C independently selected from -(L1)c-P1-(L2)d-P2-(L3)d-P2-(L4)f-P4

C (L1)c-P1-(L2)d-P2-(L3)a-P-3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4

C where P1, P2, P3, and P4 = are each independently sequences of

C pharmacologically active peptides; L1, L2, L3, and L4 = are each

C independently linkers; and a, b, c, d, e, and f = are each independently

C or 1, provided that at least 1 of a and b is 1. The composition can

C have cytostatic, antiasthmatic, thrombolytic and immunosuppressive

C activities. DNAs, vectors and host cells from the present invention can

C useful for treating cancer, asthma, thrombosis, or autoimmune diseases.

C The use of an Fc domain (rather than a Fab domain) can provide a longer

C a binding comporate functions such as Fc receptor binding, protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Вb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAB17303

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 22
                                                                                   The present invention describes composition of matter (I) comprising an CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is: CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each CC (X1)a-F1-(X2)d-P2-(X1)c-P1, -(X1)c-P1, -(X1)c-P1-(X1)d-P2.

CC independently selected from -(X1)c-P1, -(X1)c-P1-(X1)d-P2.

CC where P1, P2, P3, and P4 = are each independently sequences of CC pharmacologically active peptides; I1, I2, I3, and I4 = are each independently sequences of CC independently linkers; and a, b, c, d, e, and f = are each independently CC 0 or 1, provided that at least 1 of a and b is 1. The composition can CC have cytostatic, antiasthmatic, thrombolytic and immunosuppressive CC activities. DNAs, vectors and host cells from the present invention sare CC useful for treating cancer, asthma, thrombosis, or autoimmune diseases. CC The use of an Fc domain (rather than a Fab domain) can provide a longer CC abinding, complement fixation, and possibly placental transfer. AAA69443 CC to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid component services are the examplification of the present invention acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid components of the present nucleotide and mino acid componen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 L, F, S, T, K, H, Or E; X_1 = A, I, V, L, F, G, S, or Q; X_1 = A, R, K, T, V, N, Q or G; X_1 = A, A, I, V, L, F, T, R, E, or G; X_1 = A = 1.1nker comprising 1 to 20 amino acids; and n = 0 or 1. The compounds bind to and activate the c-Mp1 receptor which mediates the activity of endogenous thrombopoietin. The TMPs are useful for increasing the production of platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which is useful for treatment of diseases which involve thombocytopenia, e.g. aplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency virus associated ITP, and systemic lupus erythematosus.
The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
FC domain, pharmacologically active peptides, and linkers. Where (I) is: (XI)a-FI-(X2)b, where: FI = an FC domain; XI and XZ = are each independently selected from -(L1)c-PI-(L1)c-PI-(L2)d-P2.

-(L1)c-PI-(L2)d-P2-(L3)e-P^3, or -(L1)c-PI-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, C, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        autoimmune disease; cytostatic; antiasthmatic; thrombolytic; immunosuppressive; EPO; TPO; CTLA4; mimetic; LL-1; TWE; anta MMF; inhibitor; erythropoietin; thrombopoietin; interleukin cytotoxic T cell lymphocyte antiqen 4; tumour necrosis factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an FC domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as FC receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6944 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid

         The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, (L3)e-P3, (L4)f-P4, -(L1)c-P1-(L2)d-P2, (L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3 (L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently sequences of considerable independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAS, vectors and host cells from the present invention can activities. DNAS, vectors and host cells from the present invention can
                                                                                                                                                                                                                                                                                    Novel composition of matter comprising an pharmacologically active peptides, useful autoimmune diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                           The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L12, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each indep
                                     activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an FC domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as FC receptor binding, protein
A binding,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 1; Page 319; 608pp; English.
